CaseTrace

Digital Investigation & Case Management

Document purpose: public-facing technical overview and practical orientation; not a security certification or independent audit.

Project status: Early-stage prototype; workflows not end-to-end verified

Technology / architecture: React, Python, FastAPI, REST APIs

Architecture & capabilities

• Investigation case and evidence organization architecture

• Initial routers and frontend for cases, evidence, findings and search

• Planned entity relationships, timeline, tasks and reports

• Proposed AI and automation integration interfaces

Evaluation / getting started

• Review repository implementation before any deployment

• Use synthetic evidence and cases for prototyping

• Track which screens are functional versus placeholders

Limitations and security considerations

• Early modules are not proof of working evidence chain of custody

• Authentication, database initialization and reporting need end-to-end validation

Engineering roadmap

• Stabilize authentication and database

• Verify evidence workflow and timelines

• Implement auditable reporting and permission controls

Source and verification

Repository: https://github.com/ibrahim1101/CaseTrace

Information reflects the accessible project README and the supplied engineering resume. Features may change; verify current repository branches, releases and documentation before deployment. Do not upload private keys, user data, internal logs or unredacted evidence.
