VAPT-X

Security Assessment Platform Concept

Document purpose: public-facing technical overview and practical orientation; not a security certification or independent audit.

Project status: Paused concept; not presented as a deployed product

Technology / architecture: Conceptual application security and vulnerability assessment workflow

Architecture & capabilities

• Planned authorized assessment tracking

• Planned findings and evidence management

• Planned remediation and reporting workflows

• Potential AI assistance only after privacy/security design

Evaluation / getting started

• Use this guide as a concept brief, not installation documentation

• Only assess systems with explicit authorization

Limitations and security considerations

• No verified runnable implementation or production release is claimed

• Specific technologies and features are subject to future design

Engineering roadmap

• Reassess scope and product overlap with CERBERUS and CaseTrace

• Prototype a narrow assessment workflow before expanding

Source and verification

No verified public project repository is available for this concept.

Information reflects the accessible project README and the supplied engineering resume. Features may change; verify current repository branches, releases and documentation before deployment. Do not upload private keys, user data, internal logs or unredacted evidence.
